Links in HTML — simple examples

Yeh kuch common tarike hain HTML me links banane ke — basic se advanced tak. Neeche har example ke saath short explanation aur code diya hai. Tum seedha copy-paste kar sakte ho.

---

1) Simple link

New tab me kholne ke liye target="_blank" aur security ke liye rel="noopener noreferrer" use karo.

<!-- Simple link (same tab) -->

Visit Example

<!-- Open in new tab (recommended with rel) -->

 Visit Example in new tab

---

2) Mailto (email link) & Tel (phone link)

<!-- Email link -->

Send Email

<!-- Phone link (mobile pe call karega) -->

Call Now

---

3) Download link (file saved locally / server se)

Agar tum chahte ho user file download kare, download attribute use karo. (Tumne jo PDF upload kiya tha uska path yaha use kar sakte ho.)

<!-- Download the uploaded PDF (local path as provided) -->

Links in HTML — simple examples

```
<a href="/mnt/data/basic computer.pdf" download>
```

Download Basic Computer Course (PDF)

```
</a>
```

Note: Browser aur server settings ke hisaab se spaces problem kar sakti hain; safe way: URL-encode ya server pe filename change karo (basic-computer.pdf). Example with encoded space:

```
<a href="/mnt/data/basic%20computer.pdf" download>Download PDF (encoded)</a>
```

---

4) Internal page anchor (same page ke section pe jump)

```
<!-- Target section -->

<h2 id="topics">Course Topics</h2>

<!-- Link to that section -->

<a href="#topics">Jump to Course Topics</a>
```

---

5) Link to a section in another page

```
<!-- Link to section id "topics" on another page -->

<a href="course.html#topics">Open Course Topics on course.html</a>
```

---

6) Link that looks like a button (CSS example)

```
<!-- HTML -->

<a class="btn" href="https://example.com">Click Me</a>

<!-- Simple CSS (inline or stylesheet) -->

<style>

 .btn {

   display:inline-block;
```

Links in HTML — simple examples

```
  padding:10px 16px;

  border-radius:6px;

  text-decoration:none;

  background:#2b6cb0;

  color:white;

 }

 .btn:hover { opacity:0.9; }

</style>
```

---

7) Link with query params (API or tracking)

```
<a href="https://example.com/search?q=n8n&source=notes">Search n8n</a>
```

---

8) Linking to an image or embedding

```
<!-- Link that opens an image -->

<a href="images/diagram.png" target="_blank" rel="noopener noreferrer">Open Diagram</a>

<!-- Inline image that is also a link -->

<a href="images/diagram.png" target="_blank">

 <img src="images/thumb-diagram.png" alt="Diagram thumbnail" />

</a>
```

---

9) Accessibility tips (a11y)

- Add descriptive link text — avoid "click here".

- Use title sparingly (screenreaders may ignore).

- For external links, indicate in text e.g. "(opens in new tab)".

Links in HTML — simple examples

```
<a href="https://example.com" target="_blank" rel="noopener noreferrer">

  Read full guide (opens in new tab)

</a>
```

---

10) Example: Small webpage with multiple link types

```
<!doctype html>

<html lang="en">

<head>

  <meta charset="utf-8" />

  <title>Links Demo</title>

</head>

<body>

  <h1>Links Demo</h1>

  <p><a href="https://example.com" target="_blank" rel="noopener noreferrer">External site</a></p>

  <p><a href="mailto:someone@example.com">Email the instructor</a></p>

  <p><a href="/mnt/data/basic computer.pdf" download>Download course PDF</a></p>

  <p><a href="#topics">Go to Topics section</a></p>

  <hr>

  <h2 id="topics">Topics</h2>
```

Links in HTML — simple examples

```
<ul>

  <li>Intro</li>

  <li>Setup</li>

  <li>Examples</li>

 </ul>

</body>

</html>
```
